Unlock the power of your POAPs

More than memories. Use your POAPs to tell the world (or the blockchain) what you like or where been without revealing who you are.

Bringing POAPs back to life with privacy and purpose

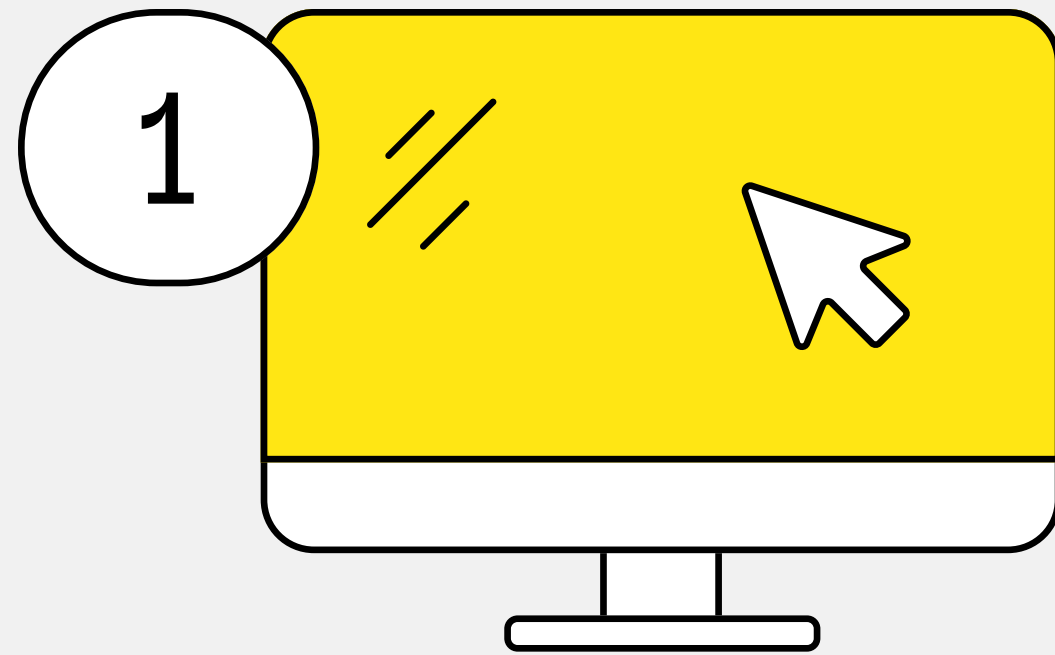

On numbers

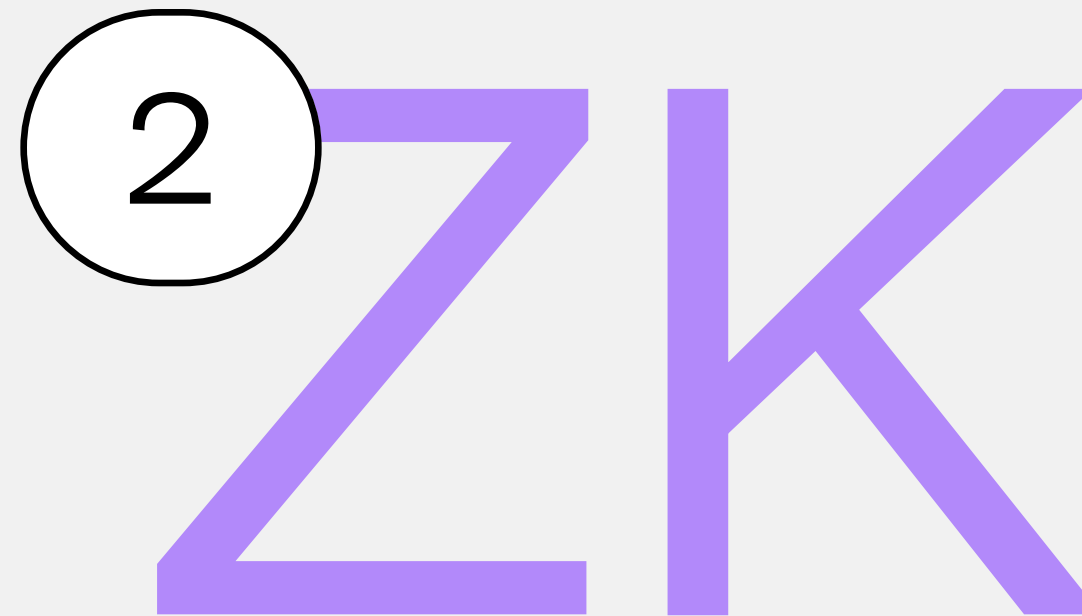

Devcon SEA

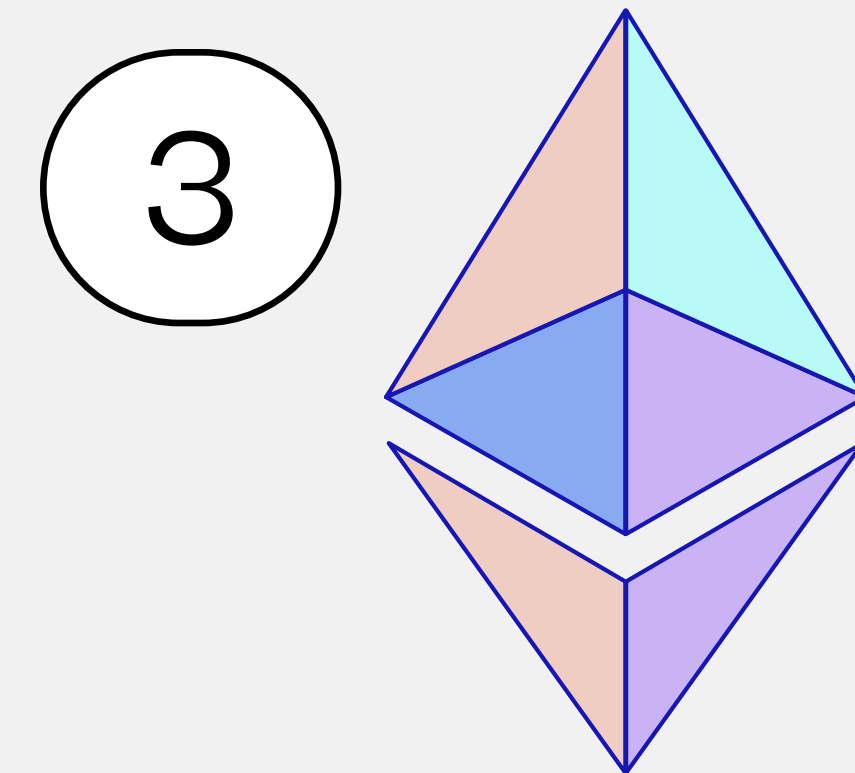

Here's how it works, in 3 simple steps.

The user selects the POAP they want to prove ownership of

Executes a zero-knowledge proof client-side, keeping the user's wallet address confidential

Sends the proof to a smart contract to verify its correctness on-chain

Heard during Devcon Week

”I’ll like to see an invisible group chat, where members can join upon proving POAP ownership.”

ANON 1

”It may be usefull for airdrops, proving that you have a POAP gives you the right to claim a token airdriop“

ANON 2

”I think POAPs are a great way to onboard users to crypto, many traditional business are creating their own POAPs“

ANON 3

Use cases

- **Airdrop** claiming upon proof of POAP ownership
- **Community moderation**, allowing users to join the community after proving the ownership of POAP
- **Private chat groups** and forum. Private POAP ownership allows to moderate participants without revealing identities
